

Product datasheet for MC203627

Ldlr (NM_010700) Mouse Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	Ldlr (NM_010700) Mouse Untagged Clone
Tag:	Tag Free
Symbol:	Ldlr
Synonyms:	Hlb301
Mammalian Cell Selection:	Neomycin
Vector:	PCMV6-Kan/Neo (PCMV6KN)
E. coli Selection:	Kanamycin (25 ug/mL)
Fully Sequenced ORF:	>BC053041

- Restriction Sites:** AscI-NotI
- ACCN:** NM_010700
- Insert Size:** 2589 bp
- OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
- Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [BC053041](#), [AAH53041](#)

RefSeq Size: 4494 bp

RefSeq ORF: 2589 bp

Locus ID: 16835

UniProt ID: [P35951](#)

Cytogenetics: 9 7.87 cM

Gene Summary: Binds LDL, the major cholesterol-carrying lipoprotein of plasma, and transports it into cells by endocytosis. In order to be internalized, the receptor-ligand complexes must first cluster into clathrin-coated pits.[UniProtKB/Swiss-Prot Function]
Transcript Variant: This variant (1) represents the longest transcript and encodes the longest isoform (1).
