OTI Disclaimer:

Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

Components:

The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq Size: 4135 bp

RefSeq ORF: 2748 bp

Locus ID: 72404

UniProt ID: [Q6NVE8](#)

Cytogenetics: X A2

Gene Summary: This gene encodes a protein containing multiple WD repeats. The encoded protein may play a role in vesicle trafficking. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Mar 2015]
Transcript Variant: This variant (1) represents the longer transcript. Both variants 1 and 2 encode the same protein.
