

Product datasheet for MC210667

Ooep (NM_026480) Mouse Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: Ooep (NM_026480) Mouse Untagged Clone

Tag: Tag Free

Symbol: Ooep

Synonyms: 2410146L05Rik; Floped; Moep19; Sddr

Mammalian Cell Selection: Neomycin

Vector: pCMV6-Entry (PS100001)

E. coli Selection: Kanamycin (25 ug/mL)

Fully Sequenced ORF: >MC210667 representing NM_026480
 Red=Cloning site Blue=ORF Orange=Stop codon

Chromatograms: https://cdn.origene.com/chromatograms/ja1871_g02.zip

Restriction Sites: SgfI-MluI

ACCN: NM_026480

Insert Size: 495 bp

OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at custsupport@origene.com or by calling 301.340.3188 option 3 for pricing and delivery. The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
Note:	Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um filter is required.
RefSeq:	BC062245 , AAH62245
RefSeq Size:	1207 bp
RefSeq ORF:	495 bp
Locus ID:	67968
UniProt ID:	Q9CWE6
Cytogenetics:	9 E1
Gene Summary:	As a member of the subcortical maternal complex (SCMC), plays an essential role for zygotes to progress beyond the first embryonic cell divisions.[UniProtKB/Swiss-Prot Function]
