

Product datasheet for **MC220805**

Rbak (NM_021326) Mouse Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	Rbak (NM_021326) Mouse Untagged Clone
Tag:	Tag Free
Symbol:	Rbak
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)

[View online »](#)

Fully Sequenced ORF: >MC220805 representing NM_021326
 Red=Cloning site Blue=ORF Orange=Stop codon

Restriction Sites: SgfI-Mlul

ACCN: NM_021326

Insert Size: 2136 bp

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
Note:	Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um filter is required.
RefSeq:	<u>NM_021326.3</u> , <u>NP_067301.1</u>
RefSeq Size:	3480 bp
RefSeq ORF:	2136 bp
Locus ID:	57782
UniProt ID:	<u>Q8BQC8</u>
Cytogenetics:	5 G2
Gene Summary:	May repress E2F-dependent transcription. May promote AR-dependent transcription. [UniProtKB/Swiss-Prot Function] Transcript Variant: This variant (1) represents the longest transcript. All three variants encode the same protein. Sequence Note: This RefSeq record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record were based on transcript alignments.
