

Product datasheet for MC225515

Fabp5 (NM 001272098) Mouse Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: Fabp5 (NM_001272098) Mouse Untagged Clone

Tag: Tag Free Symbol: Fabp5

Synonyms: E-FABP; Fabpe; Kl; Klbp; ma; mal1; PA-FABP

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)

Cell Selection: Neomycin

Fully Sequenced ORF: >MC225515 representing NM_001272098

Red=Cloning site Blue=ORF Orange=Stop codon

Restriction Sites: Sgfl-Mlul

ACCN: NM_001272098

Insert Size: 222 bp

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: Clone contains native stop codon, and expresses the complete ORF without any c-terminal

tag.

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Components:

The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
- 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: <u>NM 001272098.1</u>, <u>NP 001259027.1</u>

RefSeq Size: 796 bp
RefSeq ORF: 222 bp
Locus ID: 16592
Cytogenetics: 3 A1

Gene Summary:

The protein encoded by this gene is part of the fatty acid binding protein family (FABP). FABPs are a family of small, highly conserved, cytoplasmic proteins that bind long-chain fatty acids and other hydrophobic ligands and participate in fatty acid uptake, transport, and metabolism. In humans this gene has been associated with psoriasis and type 2 diabetes. In mouse deficiency of this gene in combination with a deficiency in Fabp4 confers protection against atherosclerosis, diet-induced obesity, insulin resistance and experimental autoimmune encephalomyelitis (the mouse model for multiple sclerosis). Alternative splicing results in multiple transcript variants that encode different protein isoforms. The mouse genome contains many pseudogenes similar to this locus. [provided by RefSeq, Jan 2013] Transcript Variant: This variant (3) lacks an exon in the coding region, which results in a frameshift, compared to variant 1. Variant 3 lacks a large portion of the central coding region found in variant 1. The encoded isoform (3) is shorter and has a distinct C-terminus, compared to isoform 1. This isoform lacks the lipocalin domain found in isoform 1. Sequence Note: This RefSeq record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record were based on transcript alignments.
