

Product datasheet for **MC225933**

Fkbp1a (NM_001302078) Mouse Untagged Clone

Product data:

Product Type: Expression Plasmids
Product Name: Fkbp1a (NM_001302078) Mouse Untagged Clone
Tag: Tag Free
Symbol: Fkbp1a
Synonyms: Fkb; Fkbp; Fkbp1; FKBP12
Vector: pCMV6-Entry (PS100001)
E. coli Selection: Kanamycin (25 ug/mL)
Cell Selection: Neomycin
Fully Sequenced ORF: >MC225933 representing NM_001302078
Red=Cloning site Blue=ORF Orange=Stop codon

Restriction Sites: Sgfl-MluI
ACCN: NM_001302078
Insert Size: 453 bp
OTI Disclaimer:

Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

[View online »](#)

OTI Annotation:	Clone contains native stop codon, and expresses the complete ORF without any c-terminal tag.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	NM_001302078.1 , NP_001289007.1
RefSeq Size:	1902 bp
RefSeq ORF:	453 bp
Locus ID:	14225
UniProt ID:	P26883
Cytogenetics:	2 G3
Gene Summary:	<p>This gene is a member of the immunophilin family. The encoded protein is a cis-trans prolyl isomerase that binds the immunosuppressants FK506 and rapamycin, and is associated with immunoregulation, protein folding, receptor signaling, protein trafficking and T-cell activation. It may modulate the calcium release activity of the ryanodine receptor Ryr1. It also interacts with the type I TGF-beta receptor. Disruption of this gene in mouse causes severe ventricular defects. Pseudogenes of this gene have been defined on chromosomes 4, 10, 14, and 16. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Sep 2014]</p> <p>Transcript Variant: This variant (4) contains an alternate exon in the 5' region and uses an alternate start codon compared to variant 1. It encodes isoform 2 which has a distinct N-terminus and is longer than isoform 1. Variants 4 and 7 both encode the same isoform (2).</p>
