

Product datasheet for MC226167

Apod (NM 001301354) Mouse Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: Apod (NM_001301354) Mouse Untagged Clone

Tag: Tag Free
Symbol: Apod

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)

Cell Selection: Neomycin

Fully Sequenced ORF: >MC226167 representing NM_001301354

Red=Cloning site Blue=ORF Orange=Stop codon

Restriction Sites: Sgfl-Mlul

ACCN: NM_001301354

Insert Size: 570 bp

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

Apod (NM_001301354) Mouse Untagged Clone - MC226167

OTI Annotation: Clone contains native stop codon, and expresses the complete ORF without any c-terminal

tag.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

in multiple transcript variants. [provided by RefSeq, Aug 2014]

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001301354.1</u>, <u>NP 001288283.1</u>

 RefSeq Size:
 2004 bp

 RefSeq ORF:
 570 bp

 Locus ID:
 11815

 UniProt ID:
 P51910

 Cytogenetics:
 16 21.41 cM

Gene Summary: The protein encoded by this gene is a component of high-density

The protein encoded by this gene is a component of high-density lipoprotein (HDL), but is unique in that it shares greater structural similarity to lipocalin than to other members of the apolipoprotein family, and has a wider tissue expression pattern. The encoded protein is involved in lipid metabolism, and ablation of this gene results in defects in triglyceride metabolism. Elevated levels of this gene product have been observed in multiple tissues of Niemann-Pick disease mouse models, as well as in some tumors. Alternative splicing results

Transcript Variant: This variant (3) lacks an exon in the 5' UTR compared to variant 1. Variants 1, 2, and 3 encode the same protein. Sequence Note: This RefSeq record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record were based on

transcript alignments.
