

Product datasheet for MG209084

Faah (NM_010173) Mouse Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Faah (NM_010173) Mouse Tagged ORF Clone

Tag: TurboGFP

Symbol: Faah

Synonyms: AW412498

Mammalian Cell Neomycin

Selection:

Vector: pCMV6-AC-GFP (PS100010)

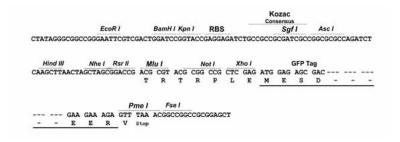

E. coli Selection: Ampicillin (100 ug/mL)

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

Cloning sites used for ORF Shuttling:

ACCN: NM_010173

ORF Size: 1737 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Faah (NM_010173) Mouse Tagged ORF Clone - MG209084

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

4 53.08 cM

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 010173.2</u>, <u>NP 034303.2</u>

 RefSeq Size:
 3805 bp

 RefSeq ORF:
 1740 bp

 Locus ID:
 14073

 UniProt ID:
 008914

Cytogenetics:

Gene Summary: Degrades bioactive fatty acid amides like oleamide, the endogenous cannabinoid,

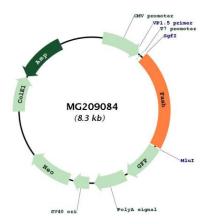

anandamide and myristic amide to their corresponding acids, thereby serving to terminate

the signaling functions of these molecules. Hydrolyzes polyunsaturated substrate anandamide preferentially as compared to monounsaturated substrates (By similarity).

[UniProtKB/Swiss-Prot Function]
