

# **Product datasheet for MG222372**

## Kcne3 (NM 001190870) Mouse Tagged ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

**Product Name:** Kcne3 (NM\_001190870) Mouse Tagged ORF Clone

Tag: TurboGFP

Symbol: Kcne3

Synonyms: 2210017H05Rik; MiRP2

Mammalian Cell Neomycin

Selection:

**Vector:** pCMV6-AC-GFP (PS100010)

E. coli Selection: Ampicillin (100 ug/mL)

#### **Cloning Scheme:**

#### Plasmid Map:

**ACCN:** NM\_001190870

ORF Size: 309 bp

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

### Kcne3 (NM\_001190870) Mouse Tagged ORF Clone - MG222372

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 001190870.1</u>, <u>NP 001177799.1</u>

 RefSeq Size:
 1333 bp

 RefSeq ORF:
 312 bp

 Locus ID:
 57442

 UniProt ID:
 Q9WTW2

Cytogenetics: 7 E2

**Gene Summary:** Ancillary protein that assembles as a beta subunit with a voltage-gated potassium channel

complex of pore-forming alpha subunits. Modulates the gating kinetics and enhances stability of the channel complex. Assembled with KCNB1 modulates the gating characteristics of the delayed rectifier voltage-dependent potassium channel KCNB1. Associated with KCNC4/Kv3.4 is proposed to form the subthreshold voltage-gated potassium channel in skeletal muscle and

to establish the resting membrane potential (RMP) in muscle cells. Associated with

KCNQ1/KCLQT1 may form the intestinal cAMP-stimulated potassium channel involved in chloride secretion that produces a current with nearly instantaneous activation with a linear

current-voltage relationship.[UniProtKB/Swiss-Prot Function]
