| Product Type:     | qPCR Primer Pairs                                                                                                                                                                                                                                                                                                                             |
| Gene ID:          | 17756                                                                                                                                                                                                                                                                                                                                         |
| Forward Sequence: | GCTGTAGCAGTCCTGAAAGGTG                                                                                                                                                                                                                                                                                                                        |
| Reverse Sequence: | CTTCCTCCACTGTGGCTGTTTG                                                                                                                                                                                                                                                                                                                        |
| ACCN:             | <u><a href="#">NM_001039934</a></u> , <u><a href="#">NM_001039934.1</a></u> , <u><a href="#">BC150945</a></u> , <u><a href="#">BC048781</a></u> , <u><a href="#">BC051410</a></u> , <u><a href="#">BC052446</a></u> , <u><a href="#">BU056737</a></u>                                                                                         |
| Synonyms:         | G1-397-34; MAP-2; Mtap-2; Mtap2; repro4                                                                                                                                                                                                                                                                                                       |
| Components:       | 1 vial of lyophilized qSTAR qPCR primer mix (1 nmol each primer, sufficient for 200 reactions). Before use, reconstitute the primer mix in 200 µl dH2O to make a final concentration of 10 µM.                                                                                                                                                |
| Quality Control:  | The primer mix has been tested to generate satisfactory qPCR data on ABI 7900HT by using the following PCR program: Stage 1: Activation: 50 °C for 2 min; Stage 2: pre-soak: 95 °C for 10 min; Stage 3: Denaturation: 95 °C for 15 sec, Annealing: 60°C for 1 min; Stage 4: Melting curve: 95°C for 15 sec, 60°C for 15 sec, 95°C for 15 sec. |
| Storage:          | Store at -20°C.                                                                                                                                                                                                                                                                                                                               |
| Stability:        | The primer mix is stable for one year from date of shipping.                                                                                                                                                                                                                                                                                  |
