OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of
	reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

Gene Summary:This gene encodes an RNA polymerase subunit that is a component of both the RNA
polymerase I and RNA polymerase III complexes. RNA polymerase I is associated with
transcription of pre-ribosomal RNAs, while RNA polymerase III is associated with transcription
of small RNAs. Pseudogenes of this gene have been defined on chromosomes 4 and 6.
Alternative splicing results in multiple transcript variants. [provided by RefSeq, Feb 2013]
