Sct (BC048484) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Sct (BC048484) Mouse Tagged ORF Clone Lentiviral Particle

Symbol: Sct

Mammalian Cell Puromycin

Selection:

Vector:

ORF Size:

Sequence:

pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag:Myc-DDKACCN:BC048484

ORF Nucleotide

or Nucleotide

The ORF insert of this clone is exactly the same as(MR200869).

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>BC048484.1</u>

RefSeq Size: 564 bp
RefSeq ORF: 419 bp
Locus ID: 20287
Cytogenetics: 7 F5

Gene Summary:

This gene encodes the precursor of a gastrointestinal peptide hormone of the secretinglucagon family. The encoded protein is secreted as a prohormone that undergoes proteolytic processing to generate a mature peptide hormone. The mature peptide regulates secretion of gastric acid, biocarbonate ions from pancreatic and biliary duct epithelia and water homeostasis in the gastrointestinal system. Mice lacking the encoded protein display decreased survival of neuroprogenitor cells during early postnatal period and impaired long-term potentiation and spatial learning in adulthood. Alternative splicing results in multiple transcript variants encoding different isoforms. All of these isoforms may be processed in a similar manner to generate the mature peptide hormone. [provided by RefSeq, Jul 2015]
