

Product datasheet for MR200920L3V

Fxyd7 (BC061101) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles Product Name: Fxyd7 (BC061101) Mouse Tagged ORF Clone Lentiviral Particle Symbol: Fxyd7 1110035I01Rik Synonyms: **Mammalian Cell** Puromycin Selection: pLenti-C-Myc-DDK-P2A-Puro (PS100092) Vector: Tag: Myc-DDK ACCN: BC061101 ORF Size: 426 bp The ORF insert of this clone is exactly the same as(MR200920). **ORF** Nucleotide Sequence: **OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info **OTI** Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. **RefSeq:** BC061101.1 **RefSeq Size:** 770 bp **RefSeq ORF:** 428 bp Locus ID: 57780 Cytogenetics: 7 B1

Fxyd7 (BC061101) Mouse Tagged ORF Clone Lentiviral Particle – MR200920L3V

Gene Summary: This reference sequence was derived from multiple replicate ESTs and validated by similar human genomic sequence. This gene encodes a member of a family of small membrane proteins that share a 35-amino acid signature sequence domain, beginning with the sequence PFXYD and containing 7 invariant and 6 highly conserved amino acids. The approved human gene nomenclature for the family is FXYD-domain containing ion transport regulator. Transmembrane topology has been established for two family members (FXYD1 and FXYD2), with the N-terminus extracellular and the C-terminus on the cytoplasmic side of the membrane. FXYD2, also known as the gamma subunit of the Na,K-ATPase, regulates the properties of that enzyme. FXYD1 (phospholemman), FXYD2 (gamma), FXYD3 (MAT-8), FXYD4 (CHIF), and FXYD5 (RIC) have been shown to induce channel activity in experimental expression systems. This gene product, FXYD7, is novel and has not been characterized as a protein. [RefSeq curation by Kathleen J. Sweadner, Ph.D., sweadner@helix.mgh.harvard.edu., Dec 2000]
