

# Product datasheet for MR200989L3V

## Hbb (BC032264) Mouse Tagged ORF Clone Lentiviral Particle

## **Product data:**

#### **Product Type: Lentiviral Particles Product Name:** Hbb (BC032264) Mouse Tagged ORF Clone Lentiviral Particle Symbol: Hbb Al036344; beta2; Hbb2; Hbbt2 Synonyms: **Mammalian Cell** Puromycin Selection: Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092) Tag: Myc-DDK BC032264 ACCN: ORF Size: 441 bp The ORF insert of this clone is exactly the same as(MR200989). **ORF** Nucleotide Sequence: **OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info **OTI** Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. **RefSeq:** BC032264, AAH32264 **RefSeq Size:** 634 bp **RefSeq ORF:** 443 bp Locus ID: 15130 Cytogenetics: 7 54.85 cM

### CRIGENE Hbb (BC032264) Mouse Tagged ORF Clone Lentiviral Particle – MR200989L3V

Gene Summary:

This gene encodes a beta polypeptide chain found in adult hemoglobin, which consists of a tetramer of two alpha chains and two beta chains, and which functions in the transport of oxygen to various peripheral tissues. This gene is one of a cluster of beta-hemoglobin genes that are distally regulated by a locus control region, and which are organized along the chromosome in the order of their developmental expression. In mouse, two major strain-specific haplotypes of the beta-globin gene cluster are found - a "single" haplotype found in C57BL/-type strains, which includes two highly similar adult beta-globin genes, beta s and beta t, and a "diffuse" haplotype found in strains such as BALB/c and 129Sv, which includes two somewhat diverse adult beta-globin genes, beta-major and beta-minor. This gene represents the beta-minor adult gene found in the "diffuse" haplotype. Primary chromosome 7 of the mouse reference genome assembly, which is derived from C57BL/6 strain mice, represents the "single" haplotype, while the "diffuse" haplotype is represented in the reference genome collection by the BALB/c strain alternate contig, NT\_095534.1. [provided by RefSeq, May 2013]
