Gene Summary:Lacks intrinsic GTPase activity. Has a low affinity for GDP, and constitutively binds GTP.<br/>Controls rearrangements of the actin cytoskeleton. Induces the Rac-dependent neuritic<br/>process formation in part by disruption of the cortical actin filaments. Causes the formation<br/>of many neuritic processes from the cell body with disruption of the cortical actin filaments<br/>(By similarity).[UniProtKB/Swiss-Prot Function]
