Isoform 1: Home transporter that exports suteplasmic home. It can also export

Gene Summary:Isoform 1: Heme transporter that exports cytoplasmic heme. It can also export
coproporphyrin and protoporphyrin IX, which are both intermediate products in the heme
biosynthetic pathway. Does not export bilirubin. Heme export depends on the presence of
HPX and is required to maintain intracellular free heme balance, protecting cells from heme
toxicity. Heme export provides protection from heme or ferrous iron toxicities in liver, brain,
sensory neurons and during erythtopoiesis, a process in which heme synthesis intensifies.
Causes susceptibility to FeLV-C in vitro.[UniProtKB/Swiss-Prot Function]
