Gene Summary:Positively regulates SLC1A1/EAAC1-mediated glutamate transport by increasing its affinity for
glutamate in a PKC activity-dependent manner. Promotes the catalytic efficiency of
SLC1A1/EAAC1 probably by reducing its interaction with ARL6IP5, a negative regulator of
SLC1A1/EAAC1-mediated glutamate transport (PubMed:18684713). Plays a role in the
formation and stabilization of endoplasmic reticulum tubules. Negatively regulates apoptosis,
possibly by modulating the activity of caspase-9 (CASP9). Inhibits cleavage of CASP9-
dependent substrates and downstream markers of apoptosis but not CASP9 itself. May be
involved in protein transport, membrane trafficking, or cell signaling during hematopoietic
maturation (By similarity).[UniProtKB/Swiss-Prot Function]
