Gene Summary:Involved in the cellular defense against the biological effects of O6-methylguanine (O6-MeG)<br/>and O4-methylthymine (O4-MeT) in DNA. Repairs the methylated nucleobase in DNA by<br/>stoichiometrically transferring the methyl group to a cysteine residue in the enzyme. This is a<br/>suicide reaction: the enzyme is irreversibly inactivated.[UniProtKB/Swiss-Prot Function]
