# Product datasheet for MR202622L4V

## Chmp4b (BC011429) Mouse Tagged ORF Clone Lentiviral Particle

### **Product data:**

| Product Type:   | Lentiviral Particles   |
|---|--|
| Product Name:   | Chmp4b (BC011429) Mouse Tagged ORF Clone Lentiviral Particle   |
| Symbol:   | Chmp4b   |
| Synonyms:   | 2010012F05Rik; C76846; Snf7-2  |
| Mammalian Cell<br>Selection:                              | Puromycin  |
| Vector:   | pLenti-C-mGFP-P2A-Puro (PS100093)  |
| Tag:  | mGFP   |
| ACCN:   | BC011429   |
| ORF Size:   | 672 bp   |
| ORF Nucleotide<br>Sequence:                               | The ORF insert of this clone is exactly the same as(MR202622).   |
|   |  |
| OTI Disclaimer:   | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>  |

### Chmp4b (BC011429) Mouse Tagged ORF Clone Lentiviral Particle – MR202622L4V

Probable core component of the endosomal sorting required for transport complex III Gene Summary: (ESCRT-III) which is involved in multivesicular bodies (MVBs) formation and sorting of endosomal cargo proteins into MVBs. MVBs contain intraluminal vesicles (ILVs) that are generated by invagination and scission from the limiting membrane of the endosome and mostly are delivered to lysosomes enabling degradation of membrane proteins, such as stimulated growth factor receptors, lysosomal enzymes and lipids. The MVB pathway appears to require the sequential function of ESCRT-O, -I,-II and -III complexes. ESCRT-III proteins mostly dissociate from the invaginating membrane before the ILV is released. The ESCRT machinery also functions in topologically equivalent membrane fission events, such as the terminal stages of cytokinesis. Together with SPAST, the ESCRT-III complex promotes nuclear envelope sealing and mitotic spindle disassembly during late anaphase. Plays a role in the endosomal sorting pathway. ESCRT-III proteins are believed to mediate the necessary vesicle extrusion and/or membrane fission activities, possibly in conjunction with the AAA ATPase VPS4. When overexpressed, membrane-assembled circular arrays of CHMP4B filaments can promote or stabilize negative curvature and outward budding. CHMP4A/B/C are required for the exosomal release of SDCBP, CD63 and syndecan.[UniProtKB/Swiss-Prot Function]
