

Product datasheet for **MR202962L4V**

Snurf (NM_033174) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

| | |
|---------------------------|--|
| Product Type: | Lentiviral Particles |
| Product Name: | Snurf (NM_033174) Mouse Tagged ORF Clone Lentiviral Particle |
| Symbol: | Snurf |
| Synonyms: | 2410045I01Rik; Snrpn |
| Mammalian Cell Selection: | Puromycin |
| Vector: | pLenti-C-mGFP-P2A-Puro (PS100093) |
| Tag: | mGFP |
| ACCN: | NM_033174 |
| ORF Size: | 723 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(MR202962). |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| RefSeq: | NM_033174.2 |
| RefSeq Size: | 1971 bp |
| RefSeq ORF: | 216 bp |
| Locus ID: | 84704 |
| UniProt ID: | Q9WU12 |
| Cytogenetics: | 7 B5 |

Gene Summary:

This gene is located within the mouse orthologous Prader-Willi Syndrome critical region and is imprinted and expressed from the paternal allele. This transcript is thought to be bicistronic and can encode the small nuclear ribonucleoprotein polypeptide N (Snrpn) from a downstream open reading frame. The small protein represented by this gene is encoded by an evolutionarily-conserved upstream open reading frame and is localized to the nucleus. [provided by RefSeq, Mar 2017]
