# Product datasheet for MR204079L4V

## Tardbp (NM\_001003899) Mouse Tagged ORF Clone Lentiviral Particle

### **Product data:**

Product Type:	Lentiviral Particles
Product Name:	Tardbp (NM_001003899) Mouse Tagged ORF Clone Lentiviral Particle
Symbol:	Tardbp
Synonyms:	1190002A23Rik; C85084; TDP-43; Tdp43
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_001003899
ORF Size:	888 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(MR204079).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001003899.1</u>
RefSeq Size:	6486 bp
RefSeq ORF:	888 bp
Locus ID:	230908
UniProt ID:	<u>Q921F2</u>
Cytogenetics:	4 E2

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### CRIGENE Tardbp (NM\_001003899) Mouse Tagged ORF Clone Lentiviral Particle – MR204079L4V

Gene Summary:RNA-binding protein that is involved in various steps of RNA biogenesis and processing.<br/>Preferentially binds, via its two RNA recognition motifs RRM1 and RRM2, to GU-repeats on<br/>RNA molecules predominantly localized within long introns and in the 3' UTR of mRNAs. In<br/>turn, regulates the splicing of many non-coding and protein-coding RNAs including proteins<br/>involved in neuronal survival, as well as mRNAs that encode proteins relevant for<br/>neurodegenerative diseases. Plays a role in maintaining mitochondrial homeostasis by<br/>regulating the processing of mitochondrial transcripts. Regulates also mRNA stability by<br/>recruiting CNOT7/CAF1 deadenylase on mRNA 3' UTR leading to poly(A) tail deadenylation<br/>and thus shortening. In response to oxidative insult, associates with stalled ribosomes<br/>localized to stress granules (SGs) and contributes to cell survival. Participates also in the<br/>normal skeletal muscle formation and regeneration, forming cytoplasmic myo-granules and<br/>binding mRNAs that encode sarcomeric proteins. Plays a role in the maintenance of the<br/>circadian clock periodicity via stabilization of the CRY1 and CRY2 proteins in a FBXL3-<br/>dependent manner (PubMed:27123980).[UniProtKB/Swiss-Prot Function]
