Gene Summary:SNAREs, soluble N-ethylmaleimide-sensitive factor-attachment protein receptors, are<br/>essential proteins for fusion of cellular membranes. SNAREs localized on opposing<br/>membranes assemble to form a trans-SNARE complex, an extended, parallel four alpha-<br/>helical bundle that drives membrane fusion. STX17 is a SNARE of the autophagosome<br/>involved in autophagy through the direct control of autophagosome membrane fusion with<br/>the lysosome membrane. May also play a role in the early secretory pathway where it may<br/>maintain the architecture of the endoplasmic reticulum-Golgi intermediate<br/>compartment/ERGIC and Golgi and/or regulate transport between the endoplasmic reticulum,<br/>the ERGIC and the Golgi (By similarity).[UniProtKB/Swiss-Prot Function]
