CRIGENE Tsen34 (BC091756) Mouse Tagged ORF Clone Lentiviral Particle – MR204524L3V

Gene Summary:Constitutes one of the two catalytic subunit of the tRNA-splicing endonuclease complex, a
complex responsible for identification and cleavage of the splice sites in pre-tRNA. It cleaves
pre-tRNA at the 5'- and 3'-splice sites to release the intron. The products are an intron and
two tRNA half-molecules bearing 2',3'-cyclic phosphate and 5'-OH termini. There are no
conserved sequences at the splice sites, but the intron is invariably located at the same site in
the gene, placing the splice sites an invariant distance from the constant structural features
of the tRNA body. The tRNA splicing endonuclease is also involved in mRNA processing via its
association with pre-mRNA 3'-end processing factors, establishing a link between pre-tRNA
splicing and pre-mRNA 3'-end formation, suggesting that the endonuclease subunits function
in multiple RNA-processing events (By similarity).[UniProtKB/Swiss-Prot Function]
