

## Product datasheet for MR205023L3

## Opcml (NM\_177906) Mouse Tagged Lenti ORF Clone

## Product data:

**Product Type:** Expression Plasmids

Tag: Myc-DDK

**Symbol:** Opcml

**Synonyms:** 2900075015Rik; 3732419F12; AI844366; B930023M13Rik; C230027C17; Gm181; Obcam

## Mammalian Cell Puromycin

## Selection:

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

**E. coli Selection:** Chloramphenicol (34 ug/mL)

**ORF Nucleotide Sequence:** The ORF insert of this clone is exactly the same as (MR205023).

**Restriction Sites:** Sgfl-Mlul

### Cloning Scheme:

#### Cloning sites used for ORF Shuttling:

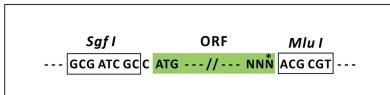

Diagram of the pET28a(+) vector showing the N-terminal sequence and restriction sites. The sequence starts with ATG, followed by a green box for the signal peptide, and then a red box for the mature protein sequence. The vector includes EcoRI, BamHI, RBS, SgfI, and ORF sites.

\* The last codon before the Stop codon of the ORF.

ACCN: NM\_177906

**ORF Size:** 1011 bp

<b>OTI Disclaimer:</b>	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in <i>E. coli</i> are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <a href="mailto:custsupport@origene.com">custsupport@origene.com</a> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <a href="#">More info</a>
<b>OTI Annotation:</b>	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
<b>Components:</b>	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
<b>Reconstitution Method:</b>	<ol style="list-style-type: none"><li>1. Centrifuge at 5,000xg for 5min.</li><li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li><li>3. Close the tube and incubate for 10 minutes at room temperature.</li><li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li><li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li></ol>
<b>Note:</b>	Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um filter is required.
<b>RefSeq:</b>	<a href="#">NM_177906.4</a>
<b>RefSeq Size:</b>	6002 bp
<b>RefSeq ORF:</b>	1014 bp
<b>Locus ID:</b>	330908
<b>Cytogenetics:</b>	9 13.73 cM
