Gene Summary:Calcium-regulated membrane-binding protein whose affinity for calcium is greatly enhanced
by anionic phospholipids. It binds two calcium ions with high affinity. May be involved in
heat-stress response (By similarity). Inhibits PCSK9-enhanced LDLR degradation, probably
reduces PCSK9 protein levels via a translational mechanism but also competes with LDLR for
binding with PCSK9 (PubMed:22848640).[UniProtKB/Swiss-Prot Function]
