### 

Gene Summary:Receptor for the C-X-C chemokine CXCL12/SDF-1 that transduces a signal by increasing<br/>intracellular calcium ion levels and enhancing MAPK1/MAPK3 activation (PubMed:8962122,<br/>PubMed:9295051, PubMed:9103415). Involved in the AKT signaling cascade (By similarity).<br/>Plays a role in regulation of cell migration, e.g. during wound healing. Acts as a receptor for<br/>extracellular ubiquitin; leading to enhanced intracellular calcium ions and reduced cellular<br/>cAMP levels. Binds bacterial lipopolysaccharide (LPS) et mediates LPS-induced inflammatory<br/>response, including TNF secretion by monocytes (By similarity). Involved in hematopoiesis<br/>and in cardiac ventricular septum formation (PubMed:9634237, PubMed:9634238,<br/>PubMed:9689100). Also plays an essential role in vascularization of the gastrointestinal tract,<br/>probably by regulating vascular branching and/or remodeling processes in endothelial cells<br/>(PubMed:9634237). Involved in cerebellar development. In the CNS, could mediate<br/>hippocampal-neuron survival (PubMed:9634238, PubMed:9689100).[UniProtKB/Swiss-Prot<br/>Function]
