## Product datasheet for MR205732L4V

## Pex3 (NM\_019961) Mouse Tagged ORF Clone Lentiviral Particle

## **Product data:**

| Product Type:                | Lentiviral Particles  |
|------------------------------|---|
| Product Name:                | Pex3 (NM_019961) Mouse Tagged ORF Clone Lentiviral Particle   |
| Symbol:                      | Pex3  |
| Synonyms:                    | 1700014F15Rik; 2810027F19Rik; 2900010N04Rik   |
| Mammalian Cell<br>Selection: | Puromycin   |
| Vector:                      | pLenti-C-mGFP-P2A-Puro (PS100093)   |
| Tag:                         | mGFP  |
| ACCN:                        | NM_019961   |
| ORF Size:                    | 1119 bp   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(MR205732).  |
| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| RefSeq:                      | <u>NM 019961.2, NP 064345.1</u>   |
| RefSeq Size:                 | 2303 bp   |
| RefSeq ORF:                  | 1119 bp   |
| Locus ID:                    | 56535   |
| UniProt ID:                  | <u>Q9QXY9</u>   |
| Cytogenetics:                | 10 A2   |
| Gene Summary:                | Involved in peroxisome biosynthesis and integrity. Assembles membrane vesicles before the matrix proteins are translocated. As a docking factor for PEX19, is necessary for the import of peroxisomal membrane proteins in the peroxisomes.[UniProtKB/Swiss-Prot Function]  |
