

Product datasheet for MR206209L4V

H28 (BC024930) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles Product Name: H28 (BC024930) Mouse Tagged ORF Clone Lentiviral Particle Symbol: H28 H-28; H28; H28-1; NS1178 Synonyms: **Mammalian Cell** Puromycin Selection: Vector: pLenti-C-mGFP-P2A-Puro (PS100093) mGFP Tag: BC024930 ACCN: ORF Size: 1188 bp The ORF insert of this clone is exactly the same as(MR206209). **ORF** Nucleotide Sequence: **OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info **OTI** Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. **RefSeq:** BC024930, AAH24930 **RefSeq Size:** 2228 bp **RefSeq ORF:** 1190 bp Locus ID: 15061 Cytogenetics: 3 76.94 cM

Gene Summary:This gene encodes a minor histocompatibility antigen that is involved in tissue graft rejection
and is polymorphic in different mouse strains. The 5' region of this gene, including the
translational start codon and the first 293 amino acids, is absent from the C57BL/6J genome.
The encoded antigen is not thought to be expressed in C57BL/6J. [provided by RefSeq, Mar
2013]
