Product datasheet for MR206721L4V

Ambn (BC087927) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	Ambn (BC087927) Mouse Tagged ORF Clone Lentiviral Particle
Symbol:	Ambn
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	BC087927
ORF Size:	1266 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(MR206721).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>BC087927.1</u>
RefSeq Size:	1602 bp
RefSeq ORF:	1268 bp
Locus ID:	11698
Cytogenetics:	5 43.63 cM

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Gene Summary:This gene encodes an extracellular matrix glycoprotein that is involved in the formation of
dental enamel. Mice lacking the encoded protein fail to undergo normal ameloblast
differentiation and develop enamel. Mice overproducing the product of this gene develop
thinner and more porous enamel, with disrupted rod patterns and abnormal crystallites.
Alternate splicing of this gene results in multiple transcript variants. [provided by RefSeq, Dec
2014]
