OTI Disclaimer: Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements.

Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA.

Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence

verification at a reduced cost. Please contact our customer care team at

<u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Aadat (NM_011834) Mouse Tagged ORF Clone Lentiviral Particle - MR206782L4V

Locus ID: 23923

UniProt ID: Q9WVM8

Cytogenetics: 8 30.85 cM

Gene Summary: Transaminase with broad substrate specificity. Has transaminase activity towards

aminoadipate, kynurenine, methionine and glutamate. Shows activity also towards

tryptophan, aspartate and hydroxykynurenine. Accepts a variety of oxo-acids as amino-group acceptors, with a preference for 2-oxoglutarate, 2-oxocaproic acid, phenylpyruvate and alphaoxo-gamma-methiol butyric acid. Can also use glyoxylate as amino-group acceptor (in vitro)

(By similarity).[UniProtKB/Swiss-Prot Function]
