# Product datasheet for MR206800L4V

## Entpd5 (NM\_001026214) Mouse Tagged ORF Clone Lentiviral Particle

### **Product data:**

Product Type:	Lentiviral Particles
Product Name:	Entpd5 (NM_001026214) Mouse Tagged ORF Clone Lentiviral Particle
Symbol:	Entpd5
Synonyms:	Al196558; Al987697; Cd39l4; ER-UDPase; mNTPase; NTPDase-5; NTPDase5; Pcph
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_001026214
ORF Size:	1284 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(MR206800).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001026214.1</u>
RefSeq Size:	4987 bp
RefSeq ORF:	1284 bp
Locus ID:	12499
UniProt ID:	<u>Q9WUZ9</u>
Cytogenetics:	12 39.18 cM

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### Entpd5 (NM\_001026214) Mouse Tagged ORF Clone Lentiviral Particle - MR206800L4V

Gene Summary:Uridine diphosphatase (UDPase) that promotes protein N-glycosylation and ATP level<br/>regulation. UDP hydrolysis promotes protein N-glycosylation and folding in the endoplasmic<br/>reticulum, as well as elevated ATP consumption in the cytosol via an ATP hydrolysis cycle.<br/>Together with CMPK1 and AK1, constitutes an ATP hydrolysis cycle that converts ATP to AMP<br/>and results in a compensatory increase in aerobic glycolysis. The nucleotide hydrolyzing<br/>preference is GDP > IDP > UDP, but not any other nucleoside di-, mono- or triphosphates, nor<br/>thiamine pyrophosphate. Plays a key role in the AKT1-PTEN signaling pathway by promoting<br/>glycolysis in proliferating cells in response to phosphoinositide 3-kinase (PI3K) signaling.<br/>[UniProtKB/Swiss-Prot Function]
