

Product datasheet for MR207917L4

Pltp (NM_011125) Mouse Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Pltp (NM_011125) Mouse Tagged Lenti ORF Clone

Tag: mGFP Symbol: Pltp

Synonyms: Bpife; OD107

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(MR207917).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_011125

ORF Size: 1482 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Pltp (NM_011125) Mouse Tagged Lenti ORF Clone - MR207917L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 011125.2</u>, <u>NP 035255.1</u>

 RefSeq Size:
 1806 bp

 RefSeq ORF:
 1482 bp

 Locus ID:
 18830

 UniProt ID:
 P55065

 Cytogenetics:
 2 85.27 cM

Gene Summary: Facilitates the transfer of a spectrum of different lipid molecules, including diacylglycerol,

phosphatidic acid, sphingomyelin, phosphatidylcholine, phosphatidylglycerol, cerebroside and

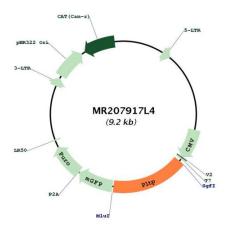

phosphatidyl ethanolamine. Essential for the transfer of excess surface lipids from

triglyceride-rich lipoproteins to HDL, thereby facilitating the formation of smaller lipoprotein remnants, contributing to the formation of LDL, and assisting in the maturation of HDL particles. PLTP also plays a key role in the uptake of cholesterol from peripheral cells and tissues that is subsequently transported to the liver for degradation and excretion. Two distinct forms of PLTP exist in plasma: an active form that can transfer PC from phospholipid vesicles to high-density lipoproteins (HDL), and an inactive form that lacks this capability (By

similarity).[UniProtKB/Swiss-Prot Function]
