

Product datasheet for MR207969L4

Glrb (NM_010298) Mouse Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Glrb (NM_010298) Mouse Tagged Lenti ORF Clone

Tag: mGFP Symbol: Glrb

Synonyms: Al853901; Glyrb; spa; spastic

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(MR207969).

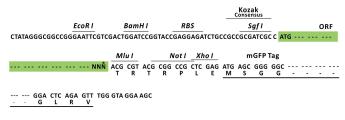

Sgfl-Mlul

Sequence:

quence:

Restriction Sites: Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_010298

ORF Size: 1491 bp

Glrb (NM_010298) Mouse Tagged Lenti ORF Clone - MR207969L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 010298.5</u>

 RefSeq Size:
 3029 bp

 RefSeq ORF:
 1491 bp

 Locus ID:
 14658

 UniProt ID:
 P48168

Cytogenetics: 3 35.71 cM

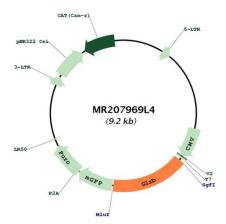

Gene Summary: This gene encodes the beta subunit of the glycine receptor, which is a pentamer composed of

alpha and beta subunits. The receptor functions as a neurotransmitter-gated ion channel, which produces hyperpolarization via increased chloride conductance due to the binding of glycine to the receptor. This gene is transcribed throughout the central nervous system of neonatal and adult mice. In humans, mutations in this gene cause startle disease, also known as hereditary hyperekplexia or congenital stiff-person syndrome, a disease characterized by muscular rigidity. Alternative splicing results in multiple transcript variants. [provided by

RefSeq, Sep 2016]
