Gene Summary:Sodium-dependent, high-affinity amino acid transporter that mediates the uptake of L-
glutamate and also L-aspartate and D-aspartate (PubMed:7903437, PubMed:28032905).
Functions as a symporter that transports one amino acid molecule together with two or three
Na(+) ions and one proton, in parallel with the counter-transport of one K(+) ion (By
similarity). Plays a redundant role in the rapid removal of released glutamate from the
synaptic cleft, which is essential for terminating the postsynaptic action of glutamate
(PubMed:15363892, PubMed:15390100,PubMed:16880397).[UniProtKB/Swiss-Prot Function]
