# Senp3 (NM\_001163571) Mouse Tagged ORF Clone Lentiviral Particle - MR208955L3VGene Summary:Protease that releases SUMO2 and SUMO3 monomers from sumoylated substrates, but has<br/>only weak activity against SUMO1 conjugates. Deconjugates SUMO2 from MEF2D, which<br/>increases its transcriptional activation capability. Deconjugates SUMO2 and SUMO3 from<br/>CDCA8. Redox sensor that, when redistributed into nucleoplasm, can act as an effector to<br/>enhance HIF1A transcriptional activity by desumoylating EP300. Required for rRNA<br/>processing through deconjugation of SUMO2 and SUMO3 from nucleophosmin. Plays a role

in the regulation of sumoylation status of ZNF148. Functions as a component of the Five Friends of Methylated CHTOP (5FMC) complex; the 5FMC complex is recruited to ZNF148 by methylated CHTOP, leading to desumoylation of ZNF148 and subsequent transactivation of ZNF148 target genes.[UniProtKB/Swiss-Prot Function]
