GRIGENE Syvn1 (NM_028769) Mouse Tagged ORF Clone Lentiviral Particle – MR209408L4V

Gene Summary:Acts as an E3 ubiquitin-protein ligase which accepts ubiquitin specifically from endoplasmic
reticulum-associated UBC7 E2 ligase and transfers it to substrates, promoting their
degradation (PubMed:12975321, PubMed:15611074). Component of the endoplasmic
reticulum quality control (ERQC) system also called ER-associated degradation (ERAD)
involved in ubiquitin-dependent degradation of misfolded endoplasmic reticulum proteins
(PubMed:12975321, PubMed:15611074). Also promotes the degradation of normal but
naturally short-lived proteins such as SGK. Protects cells from ER stress-induced apoptosis.
Sequesters p53/TP53 in the cytoplasm and promotes its degradation, thereby negatively
regulating its biological function in transcription, cell cycle regulation and apoptosis
(PubMed:17170702). Required for embryogenesis (PubMed:15611074). Mediates the
ubiquitination and subsequent degradation of cytoplasmic NFE2L1 (PubMed:21911472).
