Product datasheet for MR209471L4V

Rbm14 (BC010294) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

| Product Type: | Lentiviral Particles |
|---|---|
| Product Name: | Rbm14 (BC010294) Mouse Tagged ORF Clone Lentiviral Particle |
| Symbol: | Rbm14 |
| Synonyms: | p16K, Sytip, p16 |
| Mammalian Cell Selection: | Puromycin |
| Vector: | pLenti-C-mGFP-P2A-Puro (PS100093) |
| Tag: | mGFP |
| ACCN: | BC010294 |
| ORF Size: | 1854 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(MR209471). |
| | |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Disclaimer: OTI Annotation: | reference only. Gene Summary:May function as a nuclear receptor coactivator, enhancing transcription through other
coactivators such as NCOA6 and CITED1 (By similarity). Regulates centriole biogenesis by
suppressing the formation of aberrant centriolar protein complexes in the cytoplasm and
thus preserving mitotic spindle integrity (PubMed:25385835). Prevents the formation of the
STIL-CENPJ complex (which can induce the formation of aberrant centriolar protein
complexes) by interfering with the interaction of STIL with CENPJ (By similarity). Plays a role in
the regulation of DNA virus-mediated innate immune response by assembling into the HDP-
RNP complex, a complex that serves as a platform for IRF3 phosphorylation and subsequent
innate immune response activation through the cGAS-STING pathway.[UniProtKB/Swiss-Prot
Function]
