Product datasheet for MR209800L3V

Tnfrsf21 (NM_178589) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	Tnfrsf21 (NM_178589) Mouse Tagged ORF Clone Lentiviral Particle
Symbol:	Tnfrsf21
Synonyms:	AA959878; DR6; R74815; TR7
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_178589
ORF Size:	1968 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(MR209800).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 178589.2, NP 848704.1</u>
RefSeq Size:	3626 bp
RefSeq ORF:	1968 bp
Locus ID:	94185
UniProt ID:	<u>Q9EPU5</u>
Cytogenetics:	17 B3

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

CRIGENE Thfrsf21 (NM_178589) Mouse Tagged ORF Clone Lentiviral Particle – MR209800L3V

Gene Summary:Promotes apoptosis, possibly via a pathway that involves the activation of NF-kappa-B. Can
also promote apoptosis mediated by BAX and by the release of cytochrome c from the
mitochondria into the cytoplasm. Plays a role in neuronal apoptosis, including apoptosis in
response to amyloid peptides derived from APP, and is required for both normal cell body
death and axonal pruning. Trophic-factor deprivation triggers the cleavage of surface APP by
beta-secretase to release sAPP-beta which is further cleaved to release an N-terminal
fragment of APP (N-APP). N-APP binds TNFRSF21; this triggers caspase activation and
degeneration of both neuronal cell bodies (via caspase-3) and axons (via caspase-6).
Negatively regulates oligodendrocyte survival, maturation and myelination. Plays a role in
signaling cascades triggered by stimulation of T-cell receptors, in the adaptive immune
response and in the regulation of T-cell differentiation and proliferation. Negatively regulates
T-cell responses and the release of cytokines such as IL4, IL5, IL10, IL13 and IFNG by Th2 cells.
Negatively regulates the production of IgG, IgM and IgM in response to antigens. May inhibit
the activation of JNK in response to T-cell stimulation.[UniProtKB/Swiss-Prot Function]
