

Product datasheet for MR209992L4V

Rpgr (BC036959) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles Product Name: Rpgr (BC036959) Mouse Tagged ORF Clone Lentiviral Particle Symbol: Rpgr Mammalian Cell Puromycin Selection: Vector: pLenti-C-mGFP-P2A-Puro (PS100093) mGFP Tag: ACCN: BC036959 **ORF** Size: 2040 bp The ORF insert of this clone is exactly the same as(MR209992). **ORF** Nucleotide Sequence: **OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info This clone was engineered to express the complete ORF with an expression tag. Expression **OTI** Annotation: varies depending on the nature of the gene. **RefSeq:** BC036959 **RefSeq Size:** 2213 bp **RefSeq ORF:** 2042 bp Locus ID: 19893 X A1.1 Cytogenetics:

Gene Summary:Could be a guanine-nucleotide releasing factor (By similarity). Plays a role in ciliogenesis (By
similarity). Probably regulates cilia formation by regulating actin stress filaments and cell
contractility (By similarity). May be involved in microtubule organization and regulation of
transport in primary cilia (By similarity). Plays an important role in photoreceptor integrity.
Isoform 5 may play a critical role in spermatogenesis and in intraflagellar transport
processes.[UniProtKB/Swiss-Prot Function]
