

Product datasheet for MR210272L3

Elmo3 (NM_172760) Mouse Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Tag: Myc-DDK

Symbol: Elmo3

Synonyms: 9930107J06; BC058752; CED-12; Ced12

Mammalian Cell Puromycin

Selection:

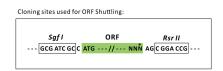

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(MR210272).

Restriction Sites: Sgfl-Rsrll

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_172760

ORF Size: 2160 bp

Elmo3 (NM_172760) Mouse Tagged Lenti ORF Clone | MR210272L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

RefSeq: <u>NM_172760.3</u>, <u>NP_766348.3</u>

RefSeq Size: 3060 bp

RefSeq ORF: 2163 bp

Locus ID: 234683

UniProt ID: Q8BYZ7

Cytogenetics: 8 D3

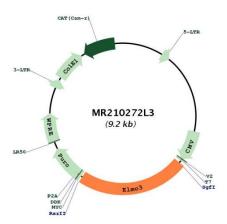

Gene Summary: Involved in cytoskeletal rearrangements required for phagocytosis of apoptotic cells and cell

motility. Acts in association with DOCK1 and CRK. Was initially proposed to be required in complex with DOCK1 to activate Rac Rho small GTPases. May enhance the quanine nucleotide

exchange factor (GEF) activity of DOCK1 (By similarity).[UniProtKB/Swiss-Prot Function]
