

Product datasheet for MR210382L4V

Polk (BC052820) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles Product Name: Polk (BC052820) Mouse Tagged ORF Clone Lentiviral Particle Symbol: Polk Dinb1 Synonyms: **Mammalian Cell** Puromycin Selection: Vector: pLenti-C-mGFP-P2A-Puro (PS100093) mGFP Tag: ACCN: BC052820 ORF Size: 2217 bp The ORF insert of this clone is exactly the same as(MR210382). **ORF** Nucleotide Sequence: **OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info **OTI** Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. **RefSeq:** BC052820, AAH52820 **RefSeq Size:** 3517 bp **RefSeq ORF:** 2219 bp Locus ID: 27015 Cytogenetics: 13 D1

Gene Summary:DNA polymerase specifically involved in DNA repair. Plays an important role in translesion
synthesis, where the normal high-fidelity DNA polymerases cannot proceed and DNA
synthesis stalls (PubMed:12432099). Depending on the context, it inserts the correct base, but
causes frequent base transitions, transversions and frameshifts. Lacks 3'-5' proofreading
exonuclease activity. Forms a Schiff base with 5'-deoxyribose phosphate at abasic sites, but
does not have lyase activity (By similarity).[UniProtKB/Swiss-Prot Function]
