

Product datasheet for MR210703L4

Agtpbp1 (BC060633) Mouse Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Agtpbp1 (BC060633) Mouse Tagged Lenti ORF Clone

Tag: mGFP

Symbol: Agtpbp1

Synonyms: Nna1, 4930445M19Rik, 1700020N17Rik

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(MR210703).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

 ACCN:
 BC060633

 ORF Size:
 2385 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Agtpbp1 (BC060633) Mouse Tagged Lenti ORF Clone - MR210703L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

67269

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>BC060633</u>

RefSeq Size: 4585 bp

RefSeq ORF: 2387 bp

Cytogenetics: 13

Locus ID:

Gene Summary: Metallocarboxypeptidase that mediates deglutamylation of target proteins. Catalyzes the

deglutamylation of polyglutamate side chains generated by post-translational

polyglutamylation in proteins such as tubulins. Also removes gene-encoded polyglutamates

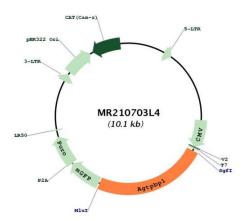

from the carboxy-terminus of target proteins such as MYLK. Acts as a long-chain

deglutamylase and specifically shortens long polyglutamate chains, while it is not able to remove the branching point glutamate, a process catalyzed by AGBL5/CCP5. Deglutamylation

plays a key role in cerebellar Purkinje cell differentiation, accumulation of tubulin polyglutamylation causing neurodegeneration.[UniProtKB/Swiss-Prot Function]
