

# Product datasheet for MR210853L3

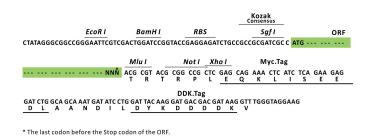

### Vav2 (BC053060) Mouse Tagged Lenti ORF Clone

#### **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

| Product Type:                | Expression Plasmids  |
|------------------------------|--|
| Product Name:                | Vav2 (BC053060) Mouse Tagged Lenti ORF Clone   |
| Tag:                         | Myc-DDK  |
| Symbol:                      | Vav2   |
| Synonyms:                    | 2810040F13Rik; Al847175; Vav-2   |
| Mammalian Cell<br>Selection: | Puromycin  |
| Vector:                      | pLenti-C-Myc-DDK-P2A-Puro (PS100092)   |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(MR210853).                           |
| <b>Restriction Sites:</b>    | Sgfl-Mlul  |
| Cloning Scheme:              |  |
|                              | Cloning sites used for ORF Shuttling:<br>Sgf I ORF Mlu I<br>GCG ATC GC ATG// NNN ACG CGT |

ACCN: ORF Size: BC053060 2487 bp

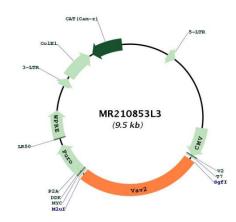

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

| <b>ORIGENE</b> Vav2 (E | 3C053060) Mouse Tagged Lenti ORF Clone – MR210853L3   |
|------------------------|---|
| OTI Disclaimer:        | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:        | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:            | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method: | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>        |
| Note:                  | Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um filter is required.  |
| RefSeq:                | <u>BC053060</u> , <u>AAH53060</u>   |
| RefSeq Size:           | 5113 bp   |
| RefSeq ORF:            | 2489 bp   |
| Locus ID:              | 22325   |
| Cytogenetics:          | 2 19.36 cM  |
| Gene Summary:          | This gene encodes a member of the Vav family of Rho guanine nucleotide exchange factors.<br>Vav family proteins are involved in the development and activation of lymphocytes, and the<br>encoded protein may also be involved in angiogenesis. Disruption of this gene in mice is<br>associated with heart, artery, and kidney defects, as well as tachycardia and hypertension.<br>Alternative splicing results in multiple transcript variants. [provided by RefSeq, Dec 2015] |
