

Product datasheet for MR211103L4

Xpc (NM_009531) Mouse Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Xpc (NM_009531) Mouse Tagged Lenti ORF Clone

Tag: mGFP Symbol: Xpc

Mammalian Cell Puromycin

Selection:

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(MR211103).

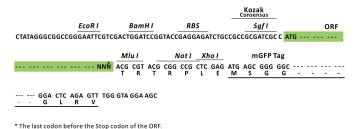

Sequence:

ACCN:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

NM_009531

ORF Size: 2790 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Xpc (NM_009531) Mouse Tagged Lenti ORF Clone - MR211103L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with

0.22um filter is required.

RefSeq: <u>NM 009531.2</u>, <u>NP 033557.2</u>

 RefSeq Size:
 3634 bp

 RefSeq ORF:
 2793 bp

 Locus ID:
 22591

 UniProt ID:
 P51612

Cytogenetics: 6 D1

Gene Summary: Involved in global genome nucleotide excision repair (GG-NER) by acting as damage sensing

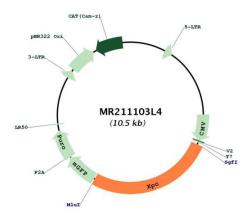

and DNA-binding factor component of the XPC complex. Has only a low DNA repair activity by itself which is stimulated by Rad23b and Rad23a. Has a preference to bind DNA containing a short single-stranded segment but not to damaged oligonucleotides. This feature is proposed to be related to a dynamic sensor function: XPC can rapidly screen duplex DNA for non-hydrogen-bonded bases by forming a transient nucleoprotein intermediate complex which

matures into a stable recognition complex through an intrinsic single-stranded DNA-binding

activity.[UniProtKB/Swiss-Prot Function]
