

Product datasheet for MR211913

Zfp521 (NM_145492) Mouse Tagged ORF Clone

Product data:

Product Type: Expression Plasmids
Product Name: Zfp521 (NM_145492) Mouse Tagged ORF Clone
Tag: Myc-DDK
Symbol: Zfp521
Synonyms: B930086A16Rik; Evi3; Znf521
Mammalian Cell Selection: Neomycin
Vector: pCMV6-Entry (PS100001)
E. coli Selection: Kanamycin (25 ug/mL)
ORF Nucleotide Sequence: >MR211913 representing NM_145492
Red=Cloning site Blue=ORF Green=Tags(s)

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Chromatograms: https://cdn.origene.com/chromatograms/mm9040_c11.zip

Restriction Sites: SgfI-MluI

Cloning Scheme:

ACCN: NM_145492

ORF Size: 3933 bp

OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	NM_145492.4 , NP_663467.1
RefSeq Size:	6152 bp
RefSeq ORF:	3936 bp
Locus ID:	225207
UniProt ID:	Q6KAS7
Cytogenetics:	18 7.68 cM
MW:	148.1 kDa
Gene Summary:	Transcription factor that can both act as an activator or a repressor depending on the context. Involved in BMP signaling and in the regulation of the immature compartment of the hematopoietic system. Associates with SMADs in response to BMP2 leading to activate transcription of BMP target genes. Acts as a transcriptional repressor via its interaction with EBF1, a transcription factor involved specification of B-cell lineage; this interaction preventing EBF1 to bind DNA and activate target genes.[UniProtKB/Swiss-Prot Function]
