

Product datasheet for MR211966L4

Wrn (NM_001122822) Mouse Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Wrn (NM_001122822) Mouse Tagged Lenti ORF Clone

Tag: mGFP Symbol: Wrn

Synonyms: Al846146 Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(MR211966).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_001122822

ORF Size: 4203 bp

Wrn (NM_001122822) Mouse Tagged Lenti ORF Clone - MR211966L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with

0.22um filter is required.

RefSeq: <u>NM 001122822.1</u>, <u>NP 001116294.1</u>

 RefSeq Size:
 6273 bp

 RefSeq ORF:
 4206 bp

 Locus ID:
 22427

 UniProt ID:
 009053

 Cytogenetics:
 8 20.3 cM

Gene Summary: Multifunctional enzyme that has both magnesium and ATP-dependent DNA-helicase activity

and 3'->5' exonuclease activity towards double-stranded DNA with a 5'-overhang. Has no nuclease activity towards single-stranded DNA or blunt-ended double-stranded DNA. Binds

preferentially to DNA substrates containing alternate secondary structures, such as

replication forks and Holliday junctions. May play an important role in the dissociation of joint

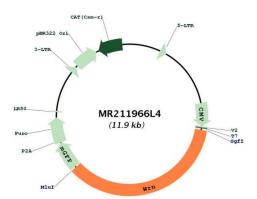

DNA molecules that can arise as products of homologous recombination, at stalled replication forks or during DNA repair. Alleviates stalling of DNA polymerases at the site of DNA lesions. Important for genomic integrity. Plays a role in the formation of DNA replication focal centers; stably associates with foci elements generating binding sites for RP-A (By

similarity). Plays a role in double-strand break repair after gamma-irradiation (By similarity).

[UniProtKB/Swiss-Prot Function]
