Restriction Sites: SgfI-MluI

Cloning Scheme:

ACCN: NM_198298

ORF Size: 5895 bp

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. [More info](#)

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_198298.2](#)

RefSeq Size: 6240 bp

RefSeq ORF: 5898 bp

Locus ID: 78455

UniProt ID: Q6DFV5

Cytogenetics: 11 E1

MW: 220 kDa

Gene Summary: May act as a helicase that plays a role in RNA metabolism in multiple tissues and organs within the developing embryo.[UniProtKB/Swiss-Prot Function]
