

Product datasheet for MR212849

Cep350 (NM_001039184) Mouse Tagged ORF Clone

Product data:

Product Type: Expression Plasmids
Product Name: Cep350 (NM_001039184) Mouse Tagged ORF Clone
Tag: Myc-DDK
Symbol: Cep350
Synonyms: 4933409L06Rik; 6430546F08Rik
Mammalian Cell Selection: Neomycin
Vector: pCMV6-Entry (PS100001)
E. coli Selection: Kanamycin (25 ug/mL)
ORF Nucleotide Sequence: >MR212849 representing NM_001039184
 Red=Cloning site Blue=ORF Green=Tags(s)

Chromatograms: https://cdn.origene.com/chromatograms/mm9041_b04.zip

Restriction Sites: SgfI-MluI

Cloning Scheme:

ACCN: NM_001039184

ORF Size: 9285 bp

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. [More info](#)

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_001039184.1](#), [NP_001034273.1](#)

RefSeq Size: 13307 bp

RefSeq ORF: 9288 bp

Locus ID: 74081

UniProt ID: [E9Q309](#)

Cytogenetics: 1 G3

MW: 346.9 kDa

Gene Summary: Plays an essential role in centriole growth by stabilizing a procentriolar seed composed of at least, SASS6 and CENPJ. Required for anchoring microtubules to the centrosomes and for the integrity of the microtubule network. Recruits PPARA to discrete subcellular compartments and thereby modulates PPARA activity. Required for ciliation.[UniProtKB/Swiss-Prot Function]
