| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |

Gene Summary:Drug efflux transporter present in a number of stem cells that acts as a regulator of cellular<br/>differentiation. Able to mediate efflux from cells of the rhodamine dye and of the therapeutic<br/>drug doxorubicin. Specifically present in limbal stem cells, where it plays a key role in corneal<br/>development and repair.[UniProtKB/Swiss-Prot Function]
