

Product datasheet for MR214067L3

Aunip (NM_001081099) Mouse Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Tag: Myc-DDK

Symbol: Aunip

Synonyms: 2610002D18Rik; Clhc1

Mammalian Cell Puromycin

Selection:

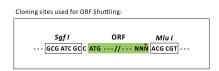

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

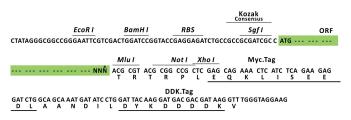

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(MR214067).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001081099

ORF Size: 1020 bp

Aunip (NM_001081099) Mouse Tagged Lenti ORF Clone | MR214067L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

RefSeq: <u>NM_001081099.1</u>, <u>NP_001074568.1</u>

RefSeq Size: 1270 bp

RefSeq ORF: 1023 bp

Locus ID: 69885

UniProt ID: E9Q6Z5

Cytogenetics: 4 D3

Gene Summary: DNA-binding protein that accumulates at DNA double-strand breaks (DSBs) following DNA

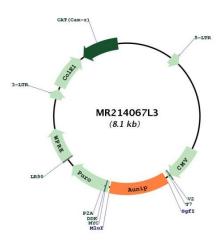

damage and promotes DNA resection and homologous recombination. Serves as a sensor of DNA damage: binds DNA with a strong preference for DNA substrates that mimic structures generated at stalled replication forks, and anchors RBBP8/CtIP to DSB sites to promote DNA end resection and ensuing homologous recombination repair. Inhibits non-homologous end

joining (NHEJ). Required for the dynamic movement of AURKA at the centrosomes and spindle

apparatus during the cell cycle.[UniProtKB/Swiss-Prot Function]
